Sebastien's Contributions WIP

Projects:

- Image Carousel
  - Created a custom image carousel in both repos for package and listing cards

- Homepage Update
  - Redesigned the entire homepage to Cody's specifications.
  - Implemented 'near you' section displaying deer hunting, fishing, camping and farm tour packages based on the users ip.
  - Implemented 'recently viewed' section displaying the latest packages the user has viewed using local storage.
  - Implemented favorited packages section.
  - Updated every image on the LO dashboard and homepage to webp.
  - Created turkey banner section

- Package/Listing Page Update
  - Completely redesigned the package and listing pages.
  - Easier to describe what I didn't create. Essentially everything the user sees on the listing/package page was created by me or significantly modified.
    - Sections
      - Optional add ons
      - What's included
      - Land details
    - New icons
    - Modals for each section
    - Tooltips
    - Pricing Panel
      - Redesigned the entire panel, creating a new tooltip for pricing details
  - What I didn't create:
    - Reviews section
    - Location Image at the bottom of the page
    - Above the fold image carousel
    - GMU section

- Field Notes
  - Created field notes feed on listing/package pages (old-ui)
    - Gql query fetching listing updates
    - Created custom Custom image carousel compatible with both sharetribe and bytescale images
    - Created new grid format for images (standard css)

  - Created Field notes feed page (new-ui)
    - Gql query fetching all followed properties/notification preferences for the user
    - Created custom image carousel compatible with both sharetribe and bytescale images
    - Created new grid format for images (emotion css)

  - Finished listing update section on the landowner dashboard
    - Redesigned based on Cody's specifications
    - Created slideout feature

- LT + Maintenance
  - Handled all bugs associated with LT+
  - Over 200 tasks completed
  - Redesigned most of the sales/benefits page
  - Fixed early access bugs
  - Updated email and messaging handlers in landtrust-lambda
  - Added unit tests for fieldnotes components
  - Wiped out our long list of engineering backlog todos.

- Non Project Feature Improvements
  - Created image cropper on the profile page
  - Made updates to 20+ email templates. (sharetribe and sendgrid)
  - Created new sections and updated existing sections on the about page
  - Redesigned and created new sections on the landowners page
  - Modified SEO pages

- Bugs…..
  - Lots and lots and lots of bug fixes during cooldown and in cycle

My Thoughts:
I've touched just about every page on our application. I have a deep understanding of both landtrust-ui and landtrust repos. My ability to fix bugs and implement features quickly while maintaining good code practices has improved significantly since joining the team in July. I am continuing to improve my devops capabilities, and have a good understanding of our on call procedure.
